DESIGN AN ENHANCED PASSENGER EXPERIENCE THAT MEETS SUSTAINABLE DEVELOPMENT GOALS?

France·BOD – 2026

01 THE CHALLENGE

Meet the challenges of decarbonization while enhancing attractiveness through an improved and original passenger experience.

02 THE SOLUTION

- Integrate within the existing infrastructure an extension of 21,000 m² at the heart of the terminal.
- Support Bordeaux Airport's already well-advanced transition through the Airport Carbon Accreditation program, and address energy consumption reduction and decarbonization objectives, particularly through the use of low-carbon materials.
- Foster the expression of a sense of place through design and programming
- Define a new traveler experience through enhanced commercial and functional performance, the creation of generous, flexible, and welcoming spaces, and

03 THE RESULT

- Simplified, intuitive, seamless passenger journey and a reduction of waiting times at various stages with a single-entry point for all destinations
- High Environmental Quality (HQE) sustainable building certification with an excellent rating
- Highest international standards in terms of comfort and passenger experience
