MAKE BAGGAGE CHECK-IN FASTER AND MORE INTUITIVE?

France·Nantes Atlantique Airport – 2026

01 THE CHALLENGE

Peak traffic can turn bag drop into a bottleneck. Nantes Atlantique also had to relocate essential check-in equipment during the Halls 3–4 works.

02 THE SOLUTION

TG Concept rebuilt the installation in March 2026, integrating France's first fully autonomous 'open collector' with RESA expertise and Desya for electrical and automation.

After kiosk check-in, passengers place tagged bags directly on the open conveyor—no counter or additional procedure.

03 THE RESULT

Commissioned on 1 April, the system ran smoothly through the busy Easter weekend. The open, ergonomic zone simplifies gestures, shortens waits and makes bag drop more intuitive.
